RE: Resource Recovery Certification - RR0268
Classification - U

Dear Mr. Haake:

We have reviewed your recent submittal to modify the above referenced resource recovery certification to add a distillation unit in Building 27, Tract I. After a review of the information submitted, the McDonnell Douglas Corporation resource recovery certification RR0268, issued May 5, 1990, has been modified contingent upon the following conditions:

1. The operator shall comply with 10 CSR 25-9.010 and all plans and processes described in the certified resource recovery application, as modified.
2. The operator shall distill and recover only those wastes listed in the application and in the amounts specified. Wastes must be recovered at the same distinct locations in which they are generated and may not be moved between any locations at the facility.
3. Still bottoms must be disposed of as a hazardous waste at an authorized hazardous waste management facility or a permitted hazardous waste facility. Only wastes with an as-generated energy value of greater than 5,000 BTU per pound (lb) can be used as a fuel in a fuel blending and/or burning process.
4. The facility must comply with all applicable permit requirements and regulations.

If you have any questions regarding compliance with your certification, please contact Mr. Wane Roberts at (314) 751-3176. Please note this modified certification will only be valid for the remainder of the two year term specified in the original certification.

Sincerely,

DIVISION OF ENVIRONMENTAL QUALITY
